## Professional Summary

- Computer Science and Engineering (Data Science) undergraduate with hands-on experience in Python, Machine Learning, Deep Learning, NLP, Computer Vision, and data analytics. Skilled in data preprocessing, exploratory data analysis, feature engineering, statistical and predictive modeling, and developing data-driven applications using Python, Streamlit, SQL, and MongoDB. Seeking opportunities to contribute to real-world machine learning solutions.

## Education

|                                                                     |                         |
|---------------------------------------------------------------------|-------------------------|
| <b>Rajeev Gandhi Memorial College of Engineering and Technology</b> | 2023 – Present          |
| B.Tech in Computer Science & Engineering (Data Science)    GPA: 8.0 | Nandyal, Andhra Pradesh |

## Technical Skills

- **Languages:** Python, Core Java, SQL
- **Machine Learning:** Machine Learning, Deep Learning, NLP, Computer Vision, Predictive Modeling
- **Data Science:** Data Preprocessing, Exploratory Data Analysis, Feature Engineering, Statistical Analysis
- **Databases:** MySQL, SQLite, MongoDB
- **Tools:** Git, GitHub, Jupyter Notebook, Streamlit
- **Web Technologies:** HTML, CSS, JavaScript

## Virtual Internships

- |                                                                                                                     |                    |
|---------------------------------------------------------------------------------------------------------------------|--------------------|
| <b>Google AI-ML – EduSkills</b>                                                                                     | Virtual Internship |
| • Completed a virtual internship focused on Artificial Intelligence and Machine Learning concepts and applications. |                    |
| <b>Siemens Data Science Master – EduSkills</b>                                                                      | Virtual Internship |
| • Completed a virtual internship focused on Data Science concepts, analytics, and data-driven applications.         |                    |

## Projects

- |                                                                                                                                                                                                           |      |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|
| <b>Telecommunications – Customer Complaint Volume Forecasting</b>                                                                                                                                         | 2025 |
| • Developed a Python-based machine learning pipeline for data preprocessing, feature engineering, and forecasting telecom customer complaint volumes from a dataset containing 2,225 rows and 11 columns. |      |
| • Applied and evaluated Linear Regression, Decision Tree, Random Forest, and ARIMA models using Python, Pandas, and Scikit-learn.                                                                         |      |
| • Built an interactive Streamlit dashboard to perform trend analysis and visualize moving averages, peak complaint periods, and service issue patterns.                                                   |      |
| <b>Multi-Modal Smart Restaurant Management System</b>                                                                                                                                                     | 2025 |
| • Developed a multi-modal AI application integrating food image classification, NLP-based customer review analysis, and sales prediction for restaurant analytics.                                        |      |
| • Applied machine learning, deep learning, and natural language processing techniques, with customer orders, reviews, and restaurant data dynamically stored in MongoDB.                                  |      |
| • Built an interactive Streamlit dashboard to analyze customer satisfaction, food demand, sales information, and business insights.                                                                       |      |

## Certifications

- |                                      |      |
|--------------------------------------|------|
| • Python Basics for Data Science     | 2024 |
| • Kaggle: Python                     | 2026 |
| • Kaggle: Pandas                     | 2026 |
| • NPTEL Certification in Soft Skills | 2024 |
| • NPTEL Certification in IoT         | 2024 |

## Achievements

- Solved 100+ Data Structures and Algorithms problems on LeetCode, strengthening problem-solving and algorithmic thinking skills.
- Demonstrated communication, teamwork, and problem-solving skills through leadership, presentations, and collaborative projects.
